Insulation Jacket

Skidmore offers easily installable, lightweight insulation jackets to improve safety and efficiency. Insulation jackets help to minimize energy loss by maintaining higher temperatures throughout a condensate recovery system. Keeping the condensate at a higher temperature reduces the energy required by the boiler to turn the condensate back into steam, helping improve the overall system efficiency and operating cost.

These jackets also offer protection from high temperature equipment in a mechanical room, reducing the risk of burns.

Advantages

- Maximize heat recovery
- Safety against burns
- Easily installed and removed
- Improve efficiency
- Custom jackets available upon request
